

## Notice of water system maintenance in Innerkip

Service interruption on May 27 – 31 2019

---

Oxford County Public Works will be conducting additional cleaning of the watermains during regular Spring flushing. **Customers should expect water to be off periodically over night for 4 nights starting Monday May 27, 2019 from 10:00pm to 6:00am Friday May 31, 2019.**

The outage will begin at 10:00pm each evening and service will be restored by 6:00am the following morning. Consumers are cautioned not to use any water during this time period for any purpose, until the operation is finished. During the hours of swabbing, the County recommends turning off your incoming water supply as well as your water softener and the electrical supply to your hot water tank. Failure to observe these precautions could result in material being drawn into the building's plumbing and possibly plugging the water line from the street to the building. It is the consumer's responsibility to take these preventive measures.

Following the maintenance, when the water has been turned back on, turn on a cold water tap not connected to a water softener or filter and let it run for approximately three (3) to five (5) minutes to clear the lines. If your water remains discoloured, continue running water, allowing sufficient time for it to clear. Discoloured water should not be consumed. The clear water has adequate levels of chlorine to ensure disinfection.

It is advisable to keep a supply of water, in containers, on hand for use during the time the water is off. A bucket of water can be used to refill a toilet tank to enable flushing.

If you have any questions please call the County of Oxford Public Works Department at 1-866-537-7778 or 519-539-9800. We apologize for any inconvenience.
